

Richmond Hill Boom Lift Training

Richmond Hill Boom Lift Training - Aerial platforms or likewise known as elevated work platforms are devices that enable workers to perform tasks and duties at elevated heights which would not be otherwise accessible. There are a variety of aerial lifts available to carry out various applications under different site conditions. If carelessly operated, elevated work platforms could result in serious injury or fatality. The most common reasons for related accidents are falls, electrocution, crushed body parts and tip-overs. Lift operators must be trained completely in techniques to avoid accidents during the operation of lifts.

Aerial Lift Safety course is designed for those who should operate the devices more effectively and safely. The program provides thorough instruction on the most utilized lifting devices within the industry.. Kinds of lift covered comprise boom supported, scissor and articulating aerial lifts. The video presents the proper methods operators must follow. Instruction focuses on pre-operational inspection, protection against falls, safe driving procedure and stability of the device.

The boom lift training program would help to deal with employee safety and equipment reliability, utilizing materials which are fully compliant with your regional and local requirements and regulations. Training methods and course management would be taught. The trainer will also know the technical aspects of aerial lift safety.

Parts of the Boom Lift Training program consist of both classroom training and practical training. Both sessions should be completed successfully for the participant to be given a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms could be positioned completely beyond the base of the machinery. The theoretical part of the training is virtually identical for both types. The practical training component could be finished faster if only one kind of machine is used.

Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training would help operators to make more efficient use of elevating work platforms whilst decreasing the possibilities of an expensive accident in the workplace. Trainees would review of business policies and applicable regulations, talk about Due Diligence, review Criminal Negligence and consequences to trainers, employers, workers and supervisors. Participants would study machine features, stability, operating procedures, fueling/charging procedures and parking. Site-specific safety issues will be addressed.
