

## Richmond Hill Warehouse Forklift Training Classes

Richmond Hill Warehouse Forklift Training Classes - Warehouse training classes exist for the purpose of raising awareness regarding common warehouse hazards. Students learn the vital safety measures which are essential to warehouse safety. An emphasis is placed on paying attention to risk factors that are potential causes of accidents. The objective of the classes is to produce workers who follow safety regulations, leading to fewer accidents in the warehouse.

### Introduction

Warehouse operations which are orderly and efficient tend to be more successful and safer. It is necessary for the employee to move and store the supplies throughout the facility in a timely and efficient way. Because of the multiple activities involved within warehouse operations, staff in warehouse environment might be at greater risk for accidents than people who work in areas with more limited activities. Hence, companies place a top priority on warehouse safety.

Knowledge of possible warehouse dangers is key to preventing accidents. Always be alert to potential hazards and methods to lessen risks. Do whatever is necessary to prevent accidents.

### General Hazards

Common kinds of hazard in a warehouse setting are falls, slips and trips. These accidents are usually caused when workers lose their balance or stumble over something that has not been put away properly. Placing or removing items from storage could lead to a slip or fumble, possibly resulting in both employee and thing to fall. The potential for slips, trips and falls is increased when workers are moving materials on various types of floor surfaces and on different levels. One more common danger is getting hit by falling items. This is normally caused by failure to properly stack objects on shelves and other surfaces. Back injuries because of improper lifting techniques are one more common danger.

There are inherent risks in using and working around workplace machines. Accidents could often be caused from the improper use of conveyors, hand trucks and forklift trucks. Warehouse tools, such as pallets, skids, strapping and cutting tools, have to be used carefully throughout loading, packing and unpacking.

Materials which are dangerous, combustible or flammable present another type of workplace danger while being stored in a warehouse. Employees have to know how to take steps to protect themselves from health hazards while working around dangerous materials.
