Richmond Hill Manlift Ticket

Richmond Hill Manlift Ticket - The Elevated Platforms and Manlifts Certification program helps to provide the needed training on the safe operating procedures, work practice, regulations and rules regarding the daily activities for the operators of this machinery. The course has been designed for people who are actively involved in these activities or those who have a basic understanding of this machine.

During the last couple of decades, aerial platforms and manlifts have become a common sight in industrial maintenance applications and on construction job sites. These machinery provide an easy way to lift employees close to what must be done on a stable platform apparatus, allowing employees to perform tasks with greater safety and comfort rather than being perched on top of scaffolding or ladders.

Similar to every other device, manlifts are only safe if they are used properly. Because they elevate employees above floor or ground level, accidents could easily take place and this might lead to serious fatalities or injuries for both the manlift operators and whoever passerby who might not be lucky enough to be standing below.

Manlifts come in different types. Most fit into 1 or 2 categories: the scissor lift, which is capable of moving upward and downward and the articulating boom lift, that can move both vertically and horizontally.
